

Figure S8

Figure S8. Comparison of the transcript levels of the native *LIP5* gene and the *myc-LIP5* transgenes.

Total RNA was isolated from Col-0 wild-type (WT) plants and *lip5-1/myc-LIP5^{WT}* and *lip5-1/myc-LIP5^{6A}* lines each with similarly high (H), medium (M) and low (L) levels of *myc-LIP5* transcripts and probed with a ³²P-labeled *LIP5* DNA fragment. Ethidium bromide staining of rRNA was shown for the assessment of equal loading.
